

Jira Connection and Test case Generator front end

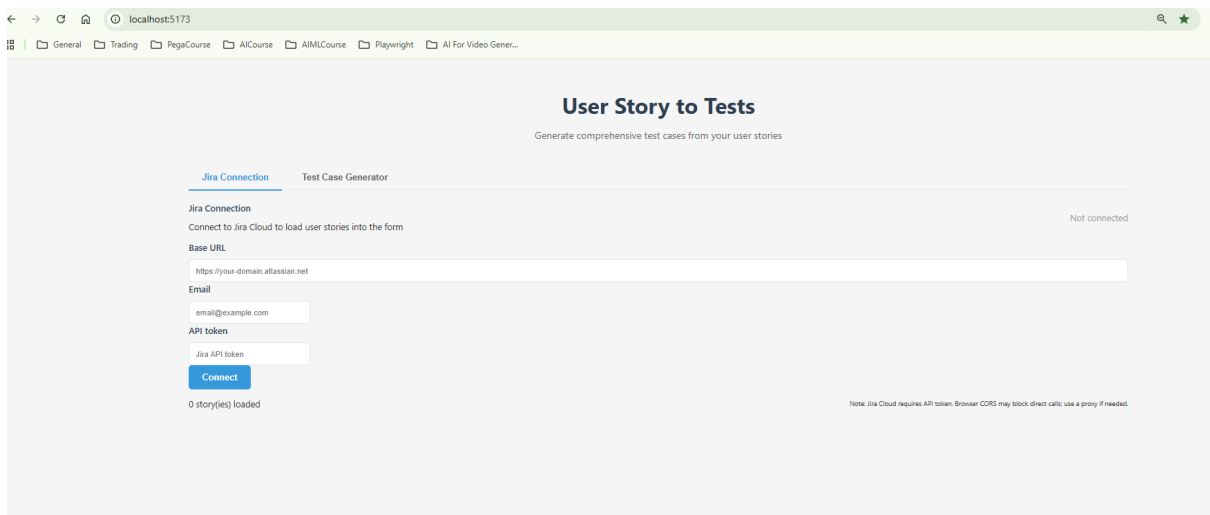

The first screenshot shows the 'Jira Connection' tab. It has a title 'User Story to Tests' and a subtitle 'Generate comprehensive test cases from your user stories'. Below the tabs, it says 'Jira Connection' and 'Connect to Jira Cloud to load user stories into the form'. A status indicator shows 'Not connected'. There are input fields for 'Base URL' (with placeholder 'https://your-domain.atlassian.net'), 'Email' (with placeholder 'email@example.com'), and 'API token' (with placeholder 'Jira API token'). A blue 'Connect' button is at the bottom. Below the button, it says '0 story(ies) loaded'. A note at the bottom right states: 'Note: Jira Cloud requires API token. Browser CORS may block direct calls; use a proxy if needed.'

The second screenshot shows the 'Test Case Generator' tab. It has the same title and subtitle. Below the tabs, it says 'Test Case Generator'. There is a form with four sections: 'Story Title *' with a placeholder 'Enter the user story title...', 'Description' with a placeholder 'Additional description (optional)...', 'Acceptance Criteria *' with a placeholder 'Enter the acceptance criteria...' and a 'Please fill out this field.' error message, and 'Additional Info' with a placeholder 'Any additional information (optional)...'. A blue 'Generate' button is at the bottom left of the form.

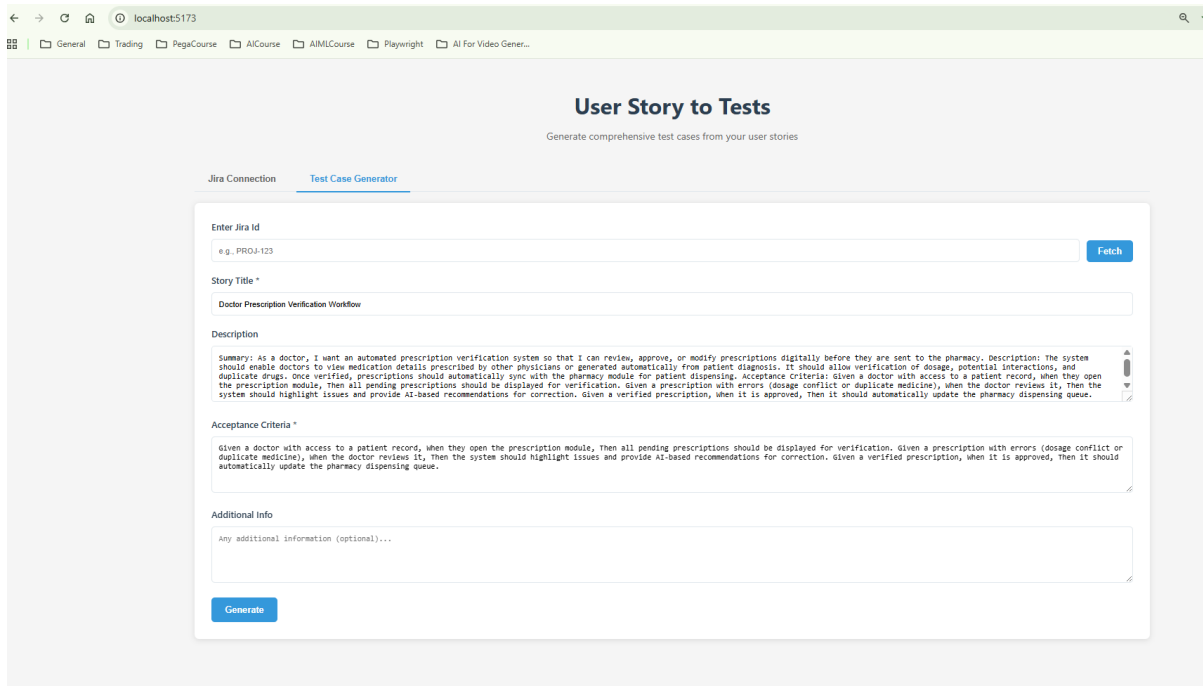

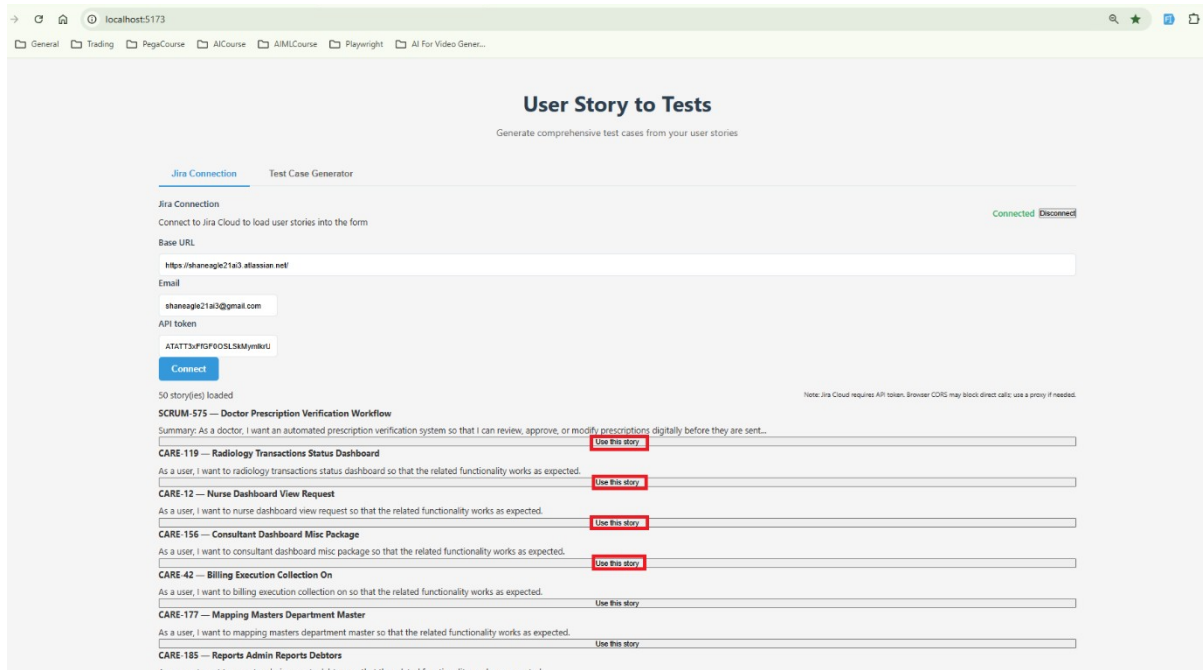

Backend Connection to Jira Implemented Successfully

When Clicked on Disconnect, it will log off

When I click on Use this story buttons, It automatically navigates to “Test Case Generator” tab and gives the details for the relevant story

2nd option, When I enter Jira id and click on Fetch Button, appropriate information will be displayed

Story Title *

Radiology Transactions Status Dashboard

Description

As a user, I want to radiology transactions status dashboard so that the related functionality works as expected.

Acceptance Criteria *

Given a doctor with access to a patient record, when they open the prescription module, then all pending prescriptions should be displayed for verification. Given a prescription with errors (dosage conflict or duplicate medicine), when the doctor reviews it, then the system should highlight issues and provide AI-based recommendations for correction. Given a verified prescription, when it is approved, then it should automatically update the pharmacy dispensing queue.
